Thought Note Project 1 Frontend

A Responsive E-Commerce Website

1 Home page

 IN the Home page (index.html) I have created two header and add it to my script.js file so that I not have to copy the code for my other files

Header and footer // injecting to all the pages

1.1   In first header I attach the logo , search bar , login button , cart button with the help of css and bootstrap.

1.2   In second header I made the navigation for

1.2.1 Home Page

1.2.2 All product

1.2.3 Women

    a. All products of women

    b. Dresses

    c. Pants

    d. Skirts

1.2.4 Men

    a. All products of men

    b. Shirts

    c. Pants

    d. Hoodies

1.2.5 Kids

1.2.6 Contact

Container Fluid

1.3   Below the second header I add the bg image with fluid , in that I add the logo and some text which make it more attractive , in the logo I add the linear gradient from top with color black and set the opacity .

1.4   Below the container I add the heading of featured products

Carousel

1.5   Below that I made the three different carousel for the different devices , in that I add four cards for large devices , two cards for medium devices and 1 card visibility for small devices with the help of display property of CSS .

Footer

1.6   At last of my page I add the footer with different links , by clicking it we can move to that page

2. All products page

2.1 By Clicking All product link we are redirect to the all product page at which we can see all the products of men , women and kids.

a. I made these cards responsive with the help of row and col property of bootstrap , I display 4 cards for large screen , 2 cards for medium screen and 1 card for small screen

```
"col-lg-3 col-md-6 col-sm-12"
```

b. In card I display the product image , product price , details of product by lorem and the button (Add to cart).

c. I made these cards-image responsive with the help of media-queries.

3. Women Dropdown

3.1 Women Dropdown work as by hovering it for large devices and by clicking it for md and sm devices

3.2 In Women Dropdown I add four list items

A. All products – Redirect to the All products of women.

B. Dressed – Redirect to the Dress page of women.

C. Pants- Redirect to the pants page of women.

D. Skirts – Redirect to the skirts page of women

4. . Men Dropdown

3.1 Men Dropdown work as by hovering it for large devices and by clicking it for md and sm devices

3.2 In Men Dropdown I add four list items

A. All products – Redirect to the All products of Men.

B. Shirt – Redirect to the Shirt page of Men.

C. Pants- Redirect to the pants page of Men.

D. Hoodies – Redirect to the Hoodies page of Men

4. Kids

Kids Contain all the products of kids.

5. Contact us

IN Contact us page I made 2 Columns with equal width ,

1st Column Contains Logo image with linear gradient background from bottom.

2nd Columns Contains form with three input(Name , Email and Message) with a submit button.

6. Login

Login button is inside the header 1.

By clicking it , a form opens with two input (Email Address and Password) with login button.

I use javascript to perform an alert message , if email=admin@admin.com and password is 123456 , the uset gets an alert message with "login successful"

Else

"Incorrect Id or Password"

I use the clear function to clear the value of email address and password

7. Cart

Cart icon is inside the header 1.

By clicking it we will redirect to the cart page.

I made 2 columns in cart page.

Cart items

In first column I made a card with header , Image of product , price of product , trash button , input box in middle of the +and-button.

summary

In second column I made card for summary of the product with it cost , shipping charges and the total cost of the product with a checkout button.

Full website is responsive

Conclusion – Learn how to make the design of the fully responsive website
